SUMMARY

Backend engineer with 2 years on multi-tenant SaaS at InnoFied — dispatch and wallet systems for a mobility platform, and device-security, vulnerability management and production LLM integration for an enterprise IT product. Java and Spring Boot by choice; seeking a Java backend role in mobility, logistics or fintech.

WORK EXPERIENCE

INNOFIED SOLUTION PVT. LTD.

Kolkata, West Bengal

Associate Developer (May 2025 – Present) · **Associate Engineer Trainee** (Oct 2024 – Apr 2025)

AllRide — multi-tenant transport SaaS: ride-hailing, shuttle, car rental, delivery and fleet management

PHP 8.3 · Laravel 12 · MySQL · Redis · Elasticsearch · WebSockets · AWS | ~950 commits in a 20-engineer codebase

- Built the platform's **auto-scheduling engine as a reusable package** — session state machine, matching strategies (round-robin, capacity-based, zone-based), driver ranking and a TripAssigner port with host adapters — replacing **three separate dispatch implementations with one engine**.
- Built **seat management** for shared-transfer trips — layouts, availability and assignment — and fixed duplicate layout versions under concurrent publishes with an upsert and version retry.
- Replaced Firestore-based driver offer delivery with **Laravel Reverb WebSockets** — per-driver private channels and broadcast isolation — cutting offer latency and removing a third-party dependency from the dispatch path.
- Shipped **driver and customer wallets** with a running-balance ledger, statements and rewards on paid reservations.
- **Sole backend author of an extracted chat microservice** (Laravel 13, Passport, Reverb): message history, batched unread counts and presence-aware notification suppression.

SecureIT — multi-tenant SaaS for enterprise device security and application lifecycle management

PHP 8.1 · Laravel 10 · database-per-tenant · MySQL · Azure · Microsoft Graph API · OpenAI | 191 of 337 commits, lead contributor

- **Lead backend contributor** on a database-per-tenant platform ingesting device, application and vulnerability data from **Microsoft Intune, SCCM and Microsoft Defender**, surfacing CVE exposure and security recommendations per client tenant.
- **Rebuilt the Microsoft Graph sync pipeline** to run within provider **rate limits** — batching, backoff and scheduled auto-sync — turning a sync that was timing out into a reliable job.
- **Integrated the OpenAI Assistants API** behind a service interface to power an in-product security chatbot and file-analysis endpoint, with message history and per-tenant isolation.
- Implemented **application version rationalisation** — normalising vendor-inconsistent display names and matching installed software against the Winget catalogue to flag out-of-date and vulnerable applications.

ARC DOCUMENT SOLUTIONS INDIA PVT. LTD. · Software Engineer Intern

Jan 2023 – Sep 2023

Built OCR extraction services in C++ and Scala (Tesseract, OpenCV), improving search accuracy and consolidating three overlapping services into one.

PROJECTS

RideX — Ride-hailing Platform · Java 21, Spring Boot 4, PostgreSQL, Redis, Docker

github.com/kumarprince06/ridex-platform

- Modular monolith with **137 REST endpoints**, 47 tables, 38 Flyway migrations and **190 tests** (JUnit 5, Mockito, PostgreSQL integration), plus two React Native apps and a React operations console on one API contract.
- Package-by-feature with a Spring-free domain layer so fare maths and ride state machines test without a context; **ArchUnit fails the build** on any module boundary violation. Dockerised with GitHub Actions CI and deploy-on-merge, decisions recorded as **ADRs**.
- Ride lifecycle, shuttle seat booking with QR boarding, Razorpay payments with webhook settlement and **idempotency**, driver payouts and a **notification outbox with retries**.

IAM Platform · Java 21, Spring Boot 3.5, Spring Security — JWT auth, RBAC and session revocation.

TECHNICAL SKILLS

Languages: Java, PHP, SQL, TypeScript

Backend: Spring Boot, Spring Security, Spring Data JPA / Hibernate, REST APIs, Microservices, Laravel

Data & Infra: PostgreSQL, MySQL, Redis, Elasticsearch, Flyway, Docker, AWS, Azure, GitHub Actions, CI/CD, Linux

Testing & APIs: JUnit 5, Mockito, Spring Boot Test, ArchUnit, Microsoft Graph API, OpenAI API, Razorpay

Practices: REST API design, multi-tenant architecture, queues, idempotency, concurrency control, ADRs

EDUCATION

B.Tech, Computer Science — Dr. Sudhir Chandra Sur Institute of Technology · GPA 9.17/10 · 2023
