PRINCE KUMAR SHARMA

Backend Engineer · Java 21 · Spring Boot · PostgreSQL

Kolkata, India (open to relocation) | +91 8617266822 | kumarprince.s0611@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Backend engineer with 2 years of production experience at Innofied building multi-tenant SaaS in PHP/Laravel: dispatch and driver matching, real-time delivery over WebSockets, wallet ledgers and rate-limited API sync. Now specialising in Java 21 and Spring Boot, with a ride-hailing backend built around transactions, idempotency and concurrency-safe state changes. Looking for a Java backend role.

TECHNICAL SKILLS

Languages: Java, SQL, PHP, TypeScript
Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA / Hibernate, REST APIs, JWT, WebSockets, Laravel
Data & Infra: PostgreSQL, MySQL, Redis, Elasticsearch, Flyway, Docker, AWS, Azure
Testing & Tools: JUnit 5, Mockito, Spring Boot Test, ArchUnit, Maven, Git, GitHub Actions (CI/CD), OpenAPI / Swagger
Concepts: REST API design, transactions, concurrency control, idempotency, outbox pattern, multi-tenancy, design patterns

JAVA PROJECTS

RideX — Ride-hailing Backend · Personal project · Java 21, Spring Boot 4, Spring Security, PostgreSQL, Redis
github.com/kumarprince06/ridex-platform

- **Modular monolith** of 22 feature packages exposing **137 REST endpoints** over 47 PostgreSQL tables and 38 Flyway migrations; **ArchUnit** fails the build on any module-boundary violation.
- Kept the domain layer **Spring-free** so fare and ride state-machine logic unit-tests without Spring; **190 tests** (JUnit 5, Mockito, PostgreSQL integration) run in **GitHub Actions CI** with deploy-on-merge. Decisions recorded as ADRs.
- **Concurrency:** driver acceptance is a conditional UPDATE on ride status, so when two drivers accept the same ride exactly one wins; shuttle seat double-booking is settled by a **unique constraint**, not check-then-insert.
- **Payments:** Razorpay with **idempotent webhook handling** (unique index on the gateway event id) and idempotency keys on wallet top-ups and payouts; all money moves through one **ledger** posting path.
- **Reliability:** notification **outbox** drained by a scheduled worker with **exponential-backoff retries**, dead-lettered after 6 attempts; shuttle boarding by QR code stored only as a hash.

IAM Platform · In progress · Java 21, Spring Boot 3.5, Spring Security, PostgreSQL, Redis — designed first: 4 ADRs (JWT storage, password hashing, session invalidation, account lockout), OpenAPI spec, ER diagram and HLD.

PROFESSIONAL EXPERIENCE

INNOFIED SOLUTION PVT. LTD. Kolkata, West Bengal
Associate Developer (May 2025 – Present) · **Associate Engineer Trainee** (Oct 2024 – Apr 2025)

AllRide — multi-tenant mobility SaaS (ride-hailing, shuttle, rental, delivery, fleet) · 20-engineer team
Tech: PHP 8.3, Laravel 12, MySQL, Redis, Elasticsearch, WebSockets (Laravel Reverb), AWS

- Built the **auto-scheduling engine** as a reusable package: session state machine, pluggable matching strategies (round-robin, capacity-based, zone-based), driver ranking and a TripAssigner port with host adapters; **replaced three separate dispatch implementations** with one engine.
- Built shared-transfer **seat management**; fixed duplicate layout versions under **concurrent publishes** with an upsert and version retry.
- Moved driver offer delivery from Firestore to **WebSockets** with per-driver private channels, cutting offer latency and removing a third-party dependency from dispatch.
- Built driver and customer **wallets** on a running-balance ledger; sole backend author of an extracted **chat microservice** (history, batched unread counts, presence-aware notifications).

SecureIT — multi-tenant enterprise device-security SaaS · lead backend contributor
Tech: PHP 8.1, Laravel 10, MySQL (database-per-tenant), Azure, Microsoft Graph API, OpenAI API

- Ingested device, application and vulnerability data from **Microsoft Intune, SCCM and Defender** into per-tenant databases, surfacing CVE exposure per client.
- Rebuilt the **Microsoft Graph sync** to stay within **rate limits** using batching, backoff and scheduled jobs, fixing a sync that used to time out.
- Integrated the **OpenAI Assistants API** behind a service interface for a security chatbot and file analysis, isolated per tenant.

ARC DOCUMENT SOLUTIONS INDIA PVT. LTD. · Software Engineer Intern Jan 2023 – Sep 2023
Built OCR extraction services in C++ and Scala (Tesseract, OpenCV), improving search accuracy by 10% and consolidating three overlapping services into one.
